EDUCATION + SKILLS

California State University Los Angeles

M.S. Computer Science

Los Angeles, California

May 2028

University of Southern California

B.S. Computer Science (Games) | GPA: 3.6/4.0

Los Angeles, California

May 2026

- Recipient of University of Southern California's Deans Scholarship

Coursework: Data Structures, Algorithms, AI, Software Development, Video Game Programming, Mobile Game Development, Programming Game Engines, Advanced Game Project, Internetworking, Linear Algebra

Languages: C/C++, C#, Python, Java, JavaScript, SQL

Engines: Unity, Roblox Studio, Unreal Engine, Godot

Gameplay/Systems: AI, UI/UX, combat, animation, physics, tools, prototyping

Tools: GitHub, Perforce, Visual Studio, GCP, CI/CD

Engineering: OOP, debugging, testing, code reviews, optimization

Web/Backend: REST APIs, Node.js, MySQL, JDBC

WORK EXPERIENCE

Glorgo's Microplastics Mine | Quality Assurance (QA) Engineer Lead

July 2025 – May 2026

Los Angeles, California

- Reduced critical defects 40% by designing QA pipelines, regression tests, and centralized bug-tracking workflows across branches
- Accelerated bug triage 60% by building Python tools to aggregate recurring playtest issues, failure patterns, and QA metrics
- Improved release stability by validating edge cases, documenting repro steps, and translating findings into engineering tasks

IndieCade | Game Design and Programming Intern

May 2025 – July 2025

Remote

- Improved iteration speed 30% by building modular C#/Unity systems for reusable logic, rapid prototyping, and feature integration
- Delivered 6+ playable builds by maintaining Git-based CI workflows, resolving branch conflicts, and validating build stability
- Optimized runtime performance by refactoring repeated update logic into event-driven systems with cleaner execution paths

Sports Media Inc. | Software Engineering Intern

January 2025 – June 2025

Remote

- Implemented responsive travel booking forms across partner websites using front-end logic, form validation, and user-flow testing
- Improved booking usability by troubleshooting layout issues, input edge cases, mobile behavior, and form submission errors
- Collaborated with stakeholders to refine website functionality, accessibility, and partner-facing web application requirements

PROJECTS

PlaytestIQ | Full-Stack Developer, In Development

Next.js, TypeScript, PostgreSQL, Prisma, Node.js

- Developing a full-stack playtest analytics platform with authenticated projects, PostgreSQL persistence, and Prisma data models
- Building event ingestion for player sessions, deaths, completions, retention, and custom gameplay metrics across test builds
- Creating dashboard views to help developers identify usability issues, gameplay friction, and playtest trends from collected data

Open Your Browser | Gameplay Programmer

C#, JavaScript, Unity, GitHub

- Programmed surreal desktop-simulation UI systems with interactive windows, menus, buttons, feedback states, and prompts
- Engineered a beat-synced rhythm minigame with timed spawns, input checks, and music-driven gameplay cues
- Improved feature integration across 20+ engineers by debugging UI/gameplay conflicts in a shared Unity codebase

Scythe of Sidereal | Game Developer

C#, C++, Unity, Perforce

- Increased engagement 40% by engineering adaptive enemy AI with vector math, pathing logic, and linear algebra
- Improved combat responsiveness 25% by implementing frame-accurate attacks, hit timing, and feedback systems
- Integrated MFX/SFX pipelines by linking combat events with audio cues from Berklee sound designers

LEADERSHIP / EXTRACURRICULAR

Makers of Entertaining Games Association | President

Summer 2024 – Spring 2026

- Led Global Game Jam for 100+ participants by coordinating team formation, production timelines, and technical support
- Improved club execution by creating planning cycles, communication workflows, and recurring milestone check-ins
- Expanded game development opportunities through workshops, project teams, and collaborative prototyping events

Open Alpha | Gameplay Programmer

Spring 2025 – Spring 2026

- Built production-level features in Unity with 20+ engineers, designers, artists, and sound designers
- Improved system stability by debugging integrations and resolving cross-discipline implementation issues
- Reduced integration errors by writing modular gameplay logic and coordinating fixes during sprint reviews
