

Joshua Guico

Gameplay Programmer | QA Engineer | Game Developer

jshguico@gmail.com | (213) 595-8680 | linkedin.com/in/joshua-guico | suvnset.github.io

Education + Technical Skills

University of Southern California

M.S. Computer Science (Game Development)

B.S. Computer Science (Games), Dean's Scholarship

Game Development: Unity, Unreal Engine, gameplay systems, game AI, UI systems, scene management, rapid prototyping

Programming: C#, C/C++, Python, JavaScript/TypeScript, Java, SQL, object-oriented design, event-driven systems

Production + QA: Perforce, Git/GitHub, Jira, playtesting, regression testing, bug triage, build validation, usability testing

Additional Tools: Visual Studio, Next.js, Node.js, PostgreSQL, Prisma, MySQL, GCP, Adobe Creative Suite

Los Angeles, California

May 2028 (Expected)

May 2026

Game Development Experience

Glorgo's Microplastics Mine | Quality Assurance Engineer Lead

July 2025 – May 2026

Los Angeles, California

- Led QA for a nearly 80-person USC Games team, coordinating smoke tests, regression passes, focused playtests, and release validation through the game's Steam launch and USC Games Expo showcase
- Built and deployed a Python Discord bot connected to Google Sheets and Apps Script, cutting bug-triage time 60%; partnered with engineering to root-cause failures and fixed 15–25% of outstanding bugs in weekly cycles

IndieCade | Game Design and Programming Intern

May 2025 – July 2025

Remote

- Built modular C#/Unity gameplay systems and replaced repeated frame-update logic with event-driven code, improving iteration speed 30%
- Delivered 6+ playable builds by resolving merge conflicts, maintaining Git-based integration, validating features, and testing build stability

Open Alpha | Gameplay Programmer

Spring 2025 – Spring 2026

Los Angeles, California

- Developed and integrated Unity features with teams of 20+ programmers, designers, artists, and audio developers using modular C# systems, task demos, pull-request reviews, and sprint-based bug fixing

Selected Game Projects

Open Your Browser | Gameplay Programmer

Unity, C#

Spring 2025

- Programmed main-loop logic, RAM pressure, minigame result hooks, and scene transitions for a desktop-interface game built around escalating system chaos
- Implemented rhythm-game timing with song elapsed time and target hit windows, then supported reusable CAPTCHA systems, retry flows, and late-production fixes

Neuromancer | Gameplay Programmer

Unity, C#

Fall 2025

- Integrated menu, settings, credits, and gameplay scenes for a narrative management game with dialogue, potion, XP, morale, and branching-ending systems
- Translated design requirements into modular programming tasks and documented onboarding, branching, task demos, and pull-request expectations for contributors

PlaytestIQ | Full-Stack Developer

Next.js, TypeScript, PostgreSQL, Prisma

Summer 2026 – Present

- Building a game analytics platform that ingests project-scoped telemetry for players, sessions, deaths, retries, completions, and custom gameplay events
- Designed the PostgreSQL/Prisma data model and dashboard views so developers can identify friction, compare playtest behavior, and choose what to test next

Leadership + Additional Experience

Makers of Entertaining Games Association | President

Summer 2024 – Spring 2026

Los Angeles, California

- Led Global Game Jam for 100+ participants, coordinating team formation, production schedules, technical support, and event operations
- Directed speaker panels, workshops, game jams, and recurring planning cycles for USC's student game-development community

Additional Software Experience: Software Engineering Intern, Sports Media Inc. (Jan 2025 – Jun 2025) | Web Development Intern, VSFS DME (Aug 2023 – Jan 2024)
