- City: Upgrades

City: Upgrades and Per-Round Gold Earned

- Goals:
- To simulate the basic structure of implementing city upgrades
 - To show the interplay between rounds, money, upgrades, and the global temperature.

- Details:
- *Start a timer!*
 - Create a basic screen that displays variables like Temperature (Base Value 55), how much the temperature is going to go up by (Base Value 1), the current round (Base value 0), current amount of money (base value 0).
 - Then create buttons for "Next Round" and "Upgrade Energy Systems"
 - Everytime a player hits next round:
 - Play an audio of balloons popping for 3 seconds.
 - While the audio is playing, trigger a "RoundIsActive" state that disables all buttons.
 - When the audio is done, the amount of money should go up by 100,150,200,250,300, and the temperature should increase by 1
 - When you buy an upgrade, remove the amount of money required to purchase from the players total and then remove the amount of temperature increase that will occur, and disable the button for the rest of play (HasBeenPurchased).

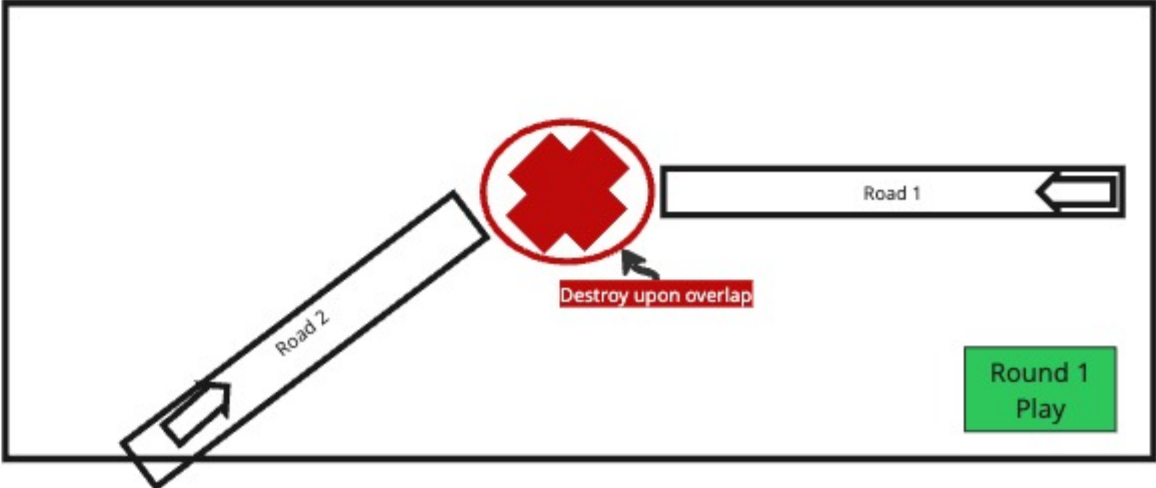

Enemies: Pathfinding/Spawners

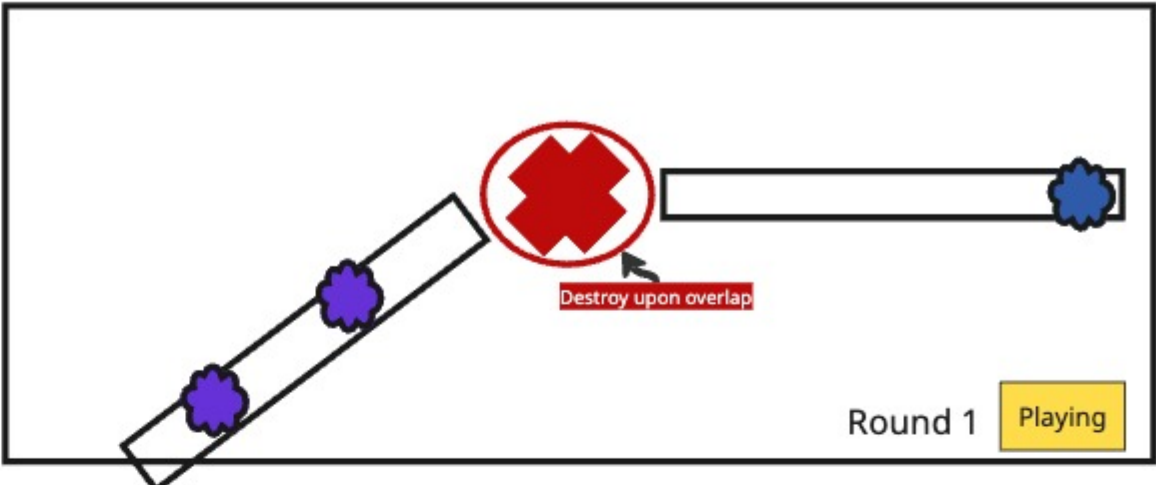

- Goals:
- To figure out how much effort goes into creating 4 separate spawners that work based off rounds.
 - To figure out how much effort goes into enemy pathfinding, especially if each route is slightly different.
- Details:
- *Start a timer!*
 - Create a map that has two roads. One that is a straight shot to the center (Road 1) and one that needs to pathfind on both axes.
 - Create two seperate spawners for each road. These should be an array that can hold multiple same/different enemies.
 - Create a play button and when you press play it should spawn a single enemy that travels towards the center.
 - When an enemy reaches the center, destroy it.
 - *Share progress if this works*
 - Now test if we can change the cadence of the spawns, by putting a 1 second delay between each enemy spawns.
 - We could test a way where the enemy itself has a stat associated with it called Delay, and the cadence is determined by whichever enemy went previously
 - We could test a way where the cadence is a set timer on the spawner and that determines how long the delay is.
 - Make sure that if we want a blue orb to spawn on Road 1 and a blue orb to spawn on Road 2, they follow the road they spawned on. (Inherit direction/pathfinding from your spawner rather than an enemy prefab having an attached route.)

- Maybe also helpful tests:
- Having a system that determines a round is over based on all the spawn arrays being empty AND all enemies being destroyed.
 - Making sure nothing bugs out if an array is empty on purpose. (First few rounds in the game are only going to have one road active per round)

"Dormant Volcano"
Enough Greenery for wildfire

Path
Two Parallel Roads coming from the mountain downwards

Omathu mail chutes - Avatar

Aesthetic:
Dusty, Dry

Path
Has a loop built into it

'*Gaia Polis*'

For a more **poetic** and evocative version of "**City of the Earth**" in Ancient Greek, you might consider:

Γαῖα πόλις

Pronunciation: *Gâia pólis*

- **Γαῖα (Gaîa)** — an older, more mythic name for Earth, often personified as the primordial goddess Gaia.
- **πόλις (pólis)** — city

This form is more **elevated and mythic**, evoking the **divine Earth as mother and origin** — so "**Gaia's City**" or even "**City born of Earth**" might be implied.

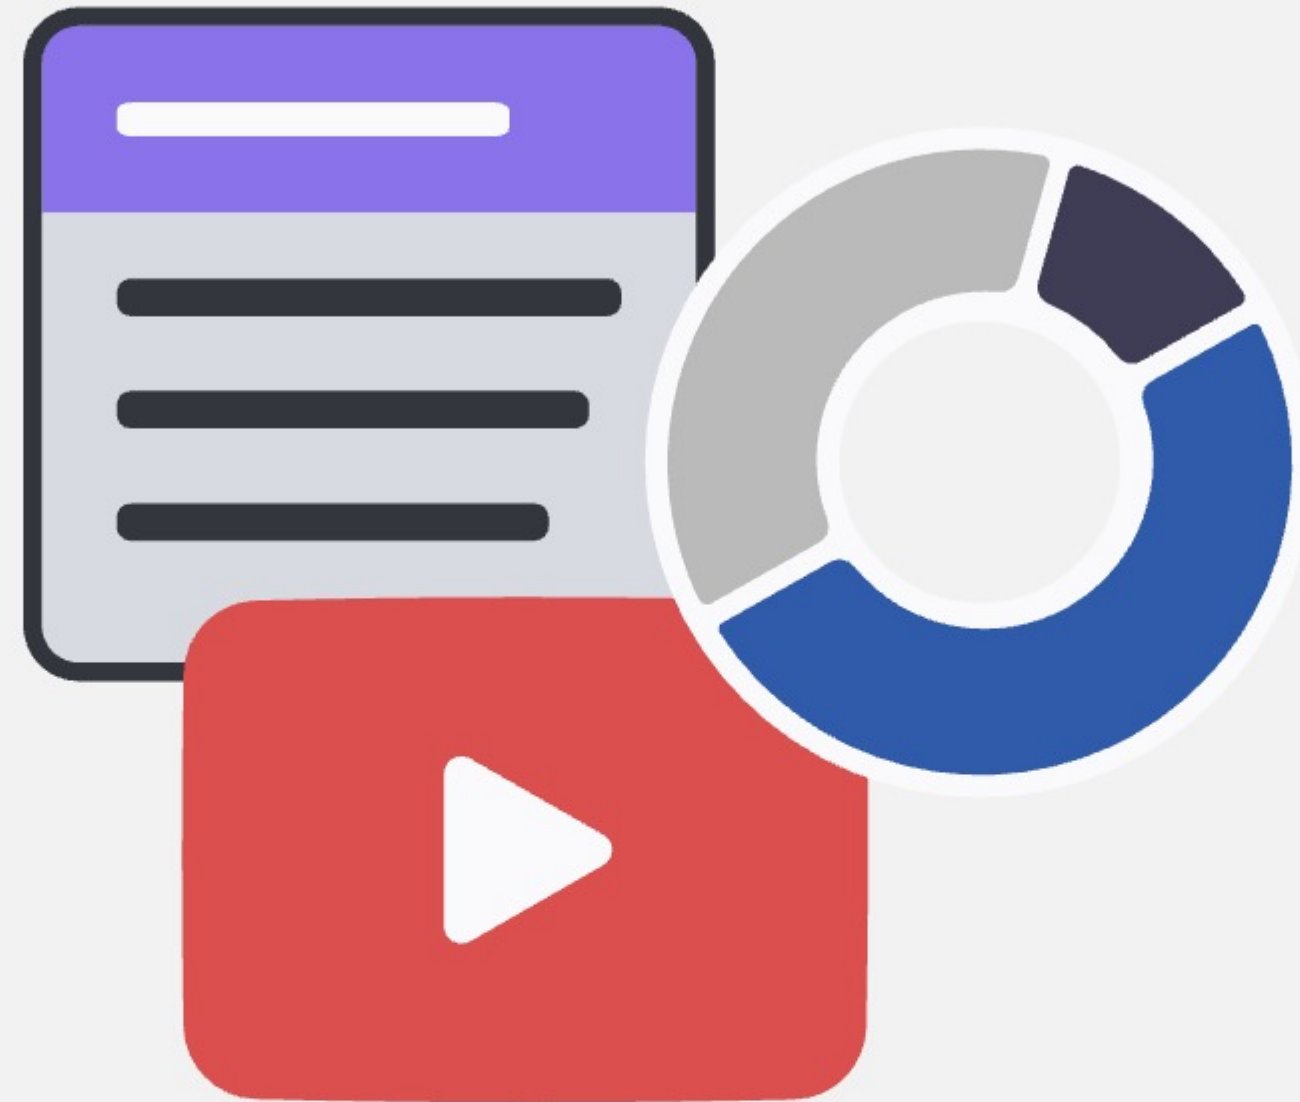

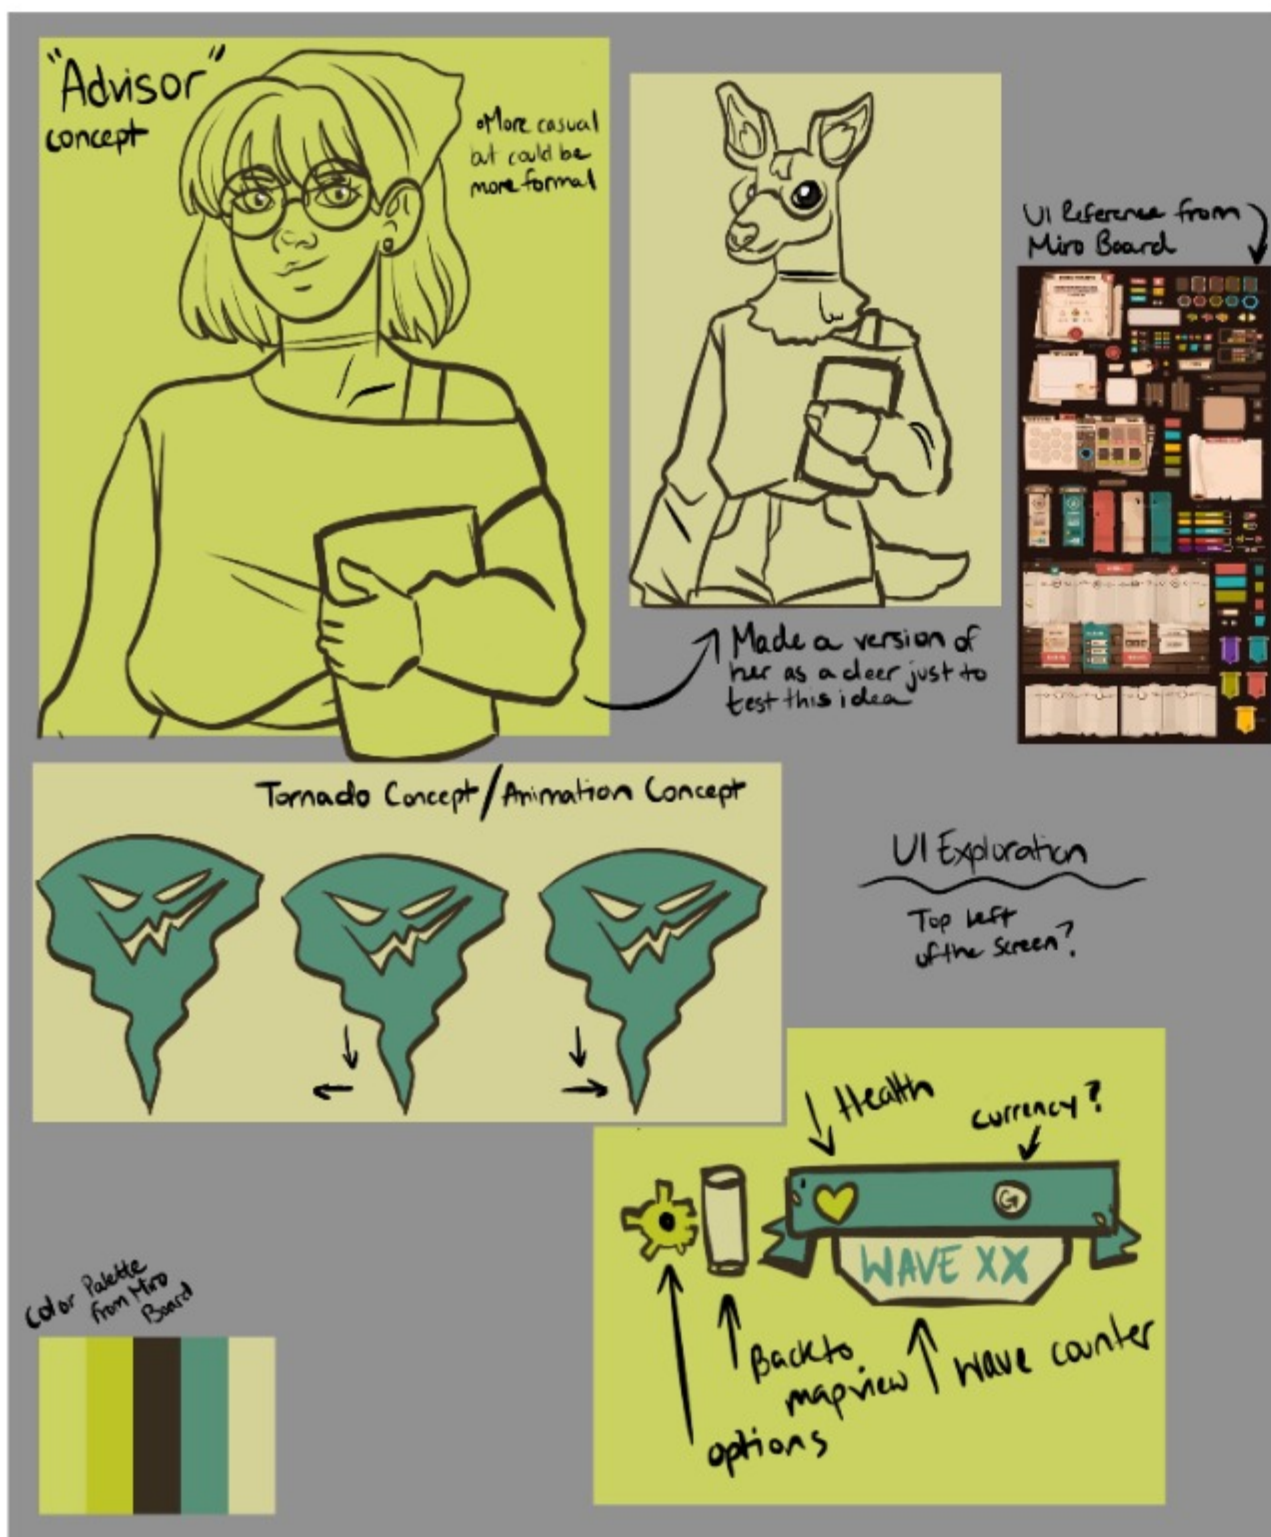

Super Mega Climate Defense - Ben

EathFront/TerraFront

natura-something?/

Earthline protocol? defense? something?

Tower Concept: Resilient Architect (Beaver)

Tower Concept: Flying Planter (Bird holding seeds)

Fish that look like they have faces

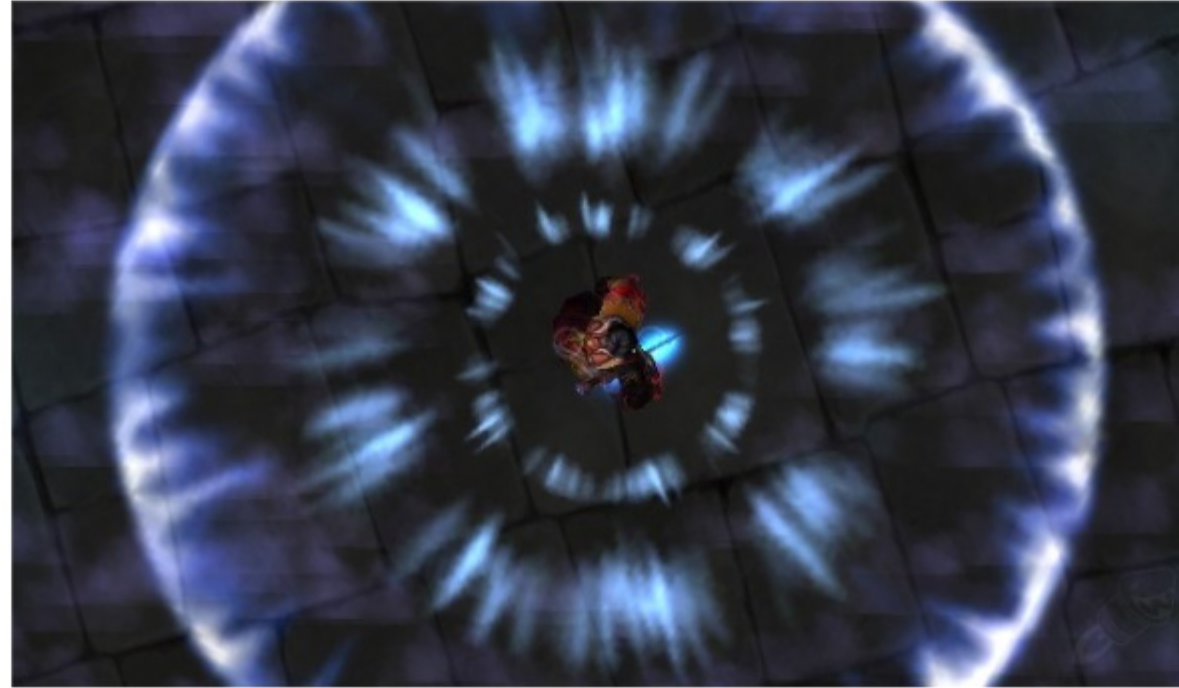

Animal in a suit with a bubble around the head

Blasting water from the hands

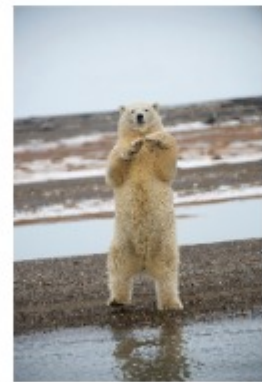

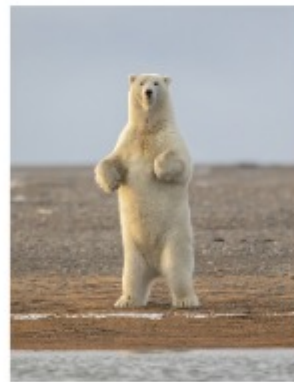

Tower Concept: Saltwater Purifier (Fish in a suit walkin on land and blasting water)

Projectile: Circle of cold

Cold Canister on the back

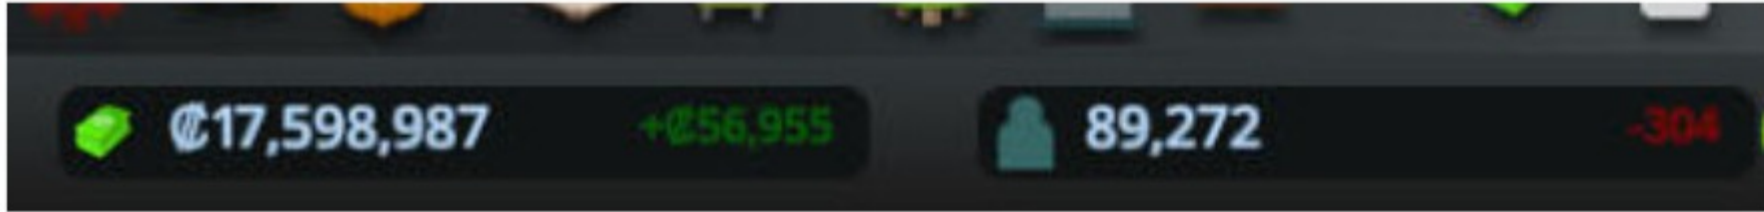

canister is hooked up to things that shoot out the cold

Tower Concept: Polar Air Solutions (Polar bear using an electric air pump)

Functionality: Reads like a thermostat with the number big and bold

Has a smaller number in parentheses that it's going to increase by each round

Red/Green depending on increase/decrease

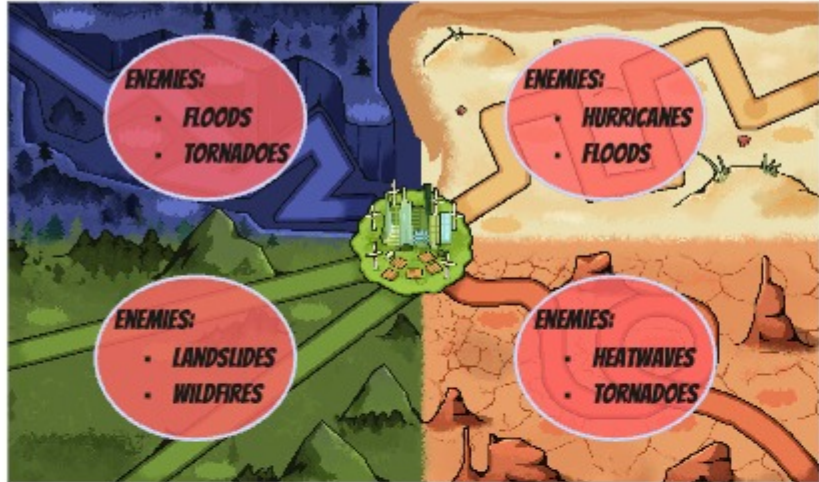

Neutral color for the current temp

Temperature Monitor

THUNDERSTRUCK VALLEY

WINDING COAST

RUMBLE MOUNTAIN

THE DROUGHT

OBJECTIVES

Stop Natural Disasters from reaching the center by building Towers

Slow the effects of global warming using the city upgrade menu

WARNING

You lose if the global average temperature reaches 60° or if the city health reaches 0
